

Evaluation Criteria for Intermediary Case Study

<u>Category</u>	<u>Excellent (5)</u>	<u>Sufficient (4)</u>	<u>Needs Improvement (3)</u>	<u>Not Evident (0)</u>
Background and goal definition	The learner provided the main context for comparing two products and their impacts with clear defined objectives and alternatives.	The learner paraphrased the two products and their impacts, but only partial context is available.	It is unclear which two products and its impacts the learner is working to revise.	No background or goal definition is identified.
Functional Unit and Quantified Reference Flows	The learner provided the product function, quantified functional unit, and the corresponding quantified reference flows, functional unit is well representative of the selective main function. Learner also clarifies the main assumptions for both products such as lifetime use, or transportation distances.	The learner provided the product function, quantified functional unit, and the corresponding quantified reference flows, functional unit is well representative of the selective main function. Learner does not include main assumptions for both products such as lifetime use, or transportation distances.	The learner provided the product function, a quantified functional unit, but some of the important corresponding quantified reference flows are missing. Learner does not include main assumptions for both products such as lifetime use, or transportation distances.	Functional unit is not well representative of the function OR no quantities given for the functional unit and reference flows.
Process Trees with Intermediary Flows	The learner provided the process tree with links of the functional unit to processes that are typically available in the LCA databases. Each of the boxes contains the amount of the considered process per	The learner provided the process tree with links of the functional unit to processes that are typically available in the LCA databases. Each of the boxes contains the amount of the considered process per	The learner provided the process tree with links of the functional unit to processes that are typically available in the LCA databases. Some of the boxes do not contain the amounts	Process tree is incomplete without quantities, or with very partial upstream and downstream processes.

	functional unit. The tree reflects well the sequence of upstream and includes downstream processes.	functional unit. Some important components are missing either in upstream or downstream processes.	of the considered process per functional unit or a majority of the quantities are incorrect. Some important components are missing either in upstream or downstream processes.	
Energy and CO2 balance, consistent with the tree	Total energy and CO2 is in the right order of magnitude and the repartition of the materials and life cycle stages are approximately correct.	One or two of the inventory flows are over or underestimated due to calculation error but most of the total energy and CO2 is in the right order of magnitude and the repartition of the materials and life cycle stages are approximately correct.	Three or more of the entries of the inventory flows are over or underestimated due to calculation error but most of the total energy and CO2 is in the right order of magnitude and the repartition of the materials and life cycle stages are approximately correct.	The use of ecoinvent data for total energy and CO2 have been misinterpreted.
Sensitivity Study of Energy or CO2	Sensitivity study graphs are presenting the variation in total energy and CO2 as a function of one or several main parameters of influence.	Some sensitivity study graphs are performed but only on the periphery parameters.	Some sensitivity calculations are performed but no graphical representation or systematic table given.	No sensitivity study available.
Clear conclusion and Next Steps	Learner discusses the differences of performance between the scenarios and provides clear and actionable conclusions supported by the main	Learner discusses the differences of performance between the scenarios and provides clear and actionable conclusions supported by the main	Learner discusses the differences of performance between the scenarios and provides clear and actionable conclusions that are not reflect well	Conclusions are missing.

	results and clarifies the project's next steps.	results but does not include the project's next steps.	the main results or are only touching issues of secondary importance and does not include the project's next steps.	
Quality of Professional Slide Deck	Slides are professional quality with readable fonts, formatting, appropriate graphic representation for results. Slides allow focus on important information without too much text.	Slides are mostly professional quality with readable fonts, formatting, appropriate graphic representation for results. Slides have too much text.	Presentation fails to provide results graphically and only presented with numbers and tables.	Slides have too much text, and fail to highlight main results.

Peer-Review Details

Overview of Assignment

In this assignment, you will draw on what you have learned in this course and through your individual explorations of an educational access issue to revise two (2) existing SDG5 targets. Your revisions should complement and enhance the SDG4 targets, in essence working towards building out an "Education and Equity Framework 2050".

Number of Reviews

2

Brief Explanation of How Assignment is Graded

Your submission will be graded by two of your peers using the grading rubric that you were provided in the previous course item. The score that you receive on your assignment will be an average of the two scores that you were given by your graders. In order to receive your final score, you will also need to complete two peer reviews of other learners' submissions. Once you have graded two submissions, and two of your peers have graded your submission, your score will become visible for you to review.

Evaluation Criteria for Abstract

<u>Category</u>	<u>Excellent (5)</u>	<u>Sufficient (4)</u>	<u>Needs Improvement (3)</u>	<u>Not Evident (0)</u>
Introduction and objectives well set up	The learner introduced the main context for comparing two products and their impacts with clearly defined objectives and alternatives.	The learner paraphrased the two products and their impacts, but only partial context is available.	It is unclear which two products and its impacts the learner is working to revise.	No background, objectives or goal definition is identified.
Method	The learner clearly and shortly summarized the method, including reference to main data sources.	The learner described the method and data but it is hard to understand the method and the main data used.	The learner described the method and data but it is hard to understand the method and no data sources are given.	Method and data sources are missing.
Results	Learner provides results that are correct, well described – with good interpretation of figures.	Learner provides results that are in the right order of magnitude but with little interpretation of the results and figures.	Learner provides results that have the order of magnitude differences with a solution and provide little interpretation of the results and figures.	No results provided OR are erroneous and not interpreted.
Adequate choice of two main figures	Figures shown are presenting the main results and present the different impact categories separately.	Figures shown are presenting the main results but impact categories are all aggregated.	Figures presenting the same type of information in a repetitive way or showing results of marginal importance	No figures OR only one figure.

Recommendations and conclusions are highly relevant. indication of future work + potential and limitation	Recommendation and actionable points that are useful to the product user with some limitations of the study mentioned.	Recommendation and actionable points that are usefully but no study limitations mentioned.	Conclusion remains very general without actionable points.	No conclusion.
Quality of the writing, concise and rich text, and professional layout	The writing is concise and rich. The layout is very professional with proper formatting.	The writing is correct but the descriptions are unclear. The layout is somewhat properly formatted.	There are several errors that make text difficult to understand that could have been revised with a word processor.	The text is very difficult to understand with multiple mistakes.
Amount of work, originality and self-initiative	Amount of work performed is high and shows original results and sensitivity studies.	Amount of work is appropriate with some original results and sensitivity studies.	Amount of work is minimalist with little original results or sensitivity study.	Amount of work is very low with no original results or sensitivity study.
